

Tele haptic services - ECG

We offer ecg services at our centre and at home or in the offices. Our new ECG devices are cloud-enabled, utilising the latest ECG artificial intelligence technology.

Furthermore, all readings are checked and verified by human cardiology experts based in the UK.

It is worth noting that all our ECG machines record and display ECG in real time. The data is securely transmitted to our UK expert in a fraction of a second. Our reporting time during core office hours (0900 – 1700 GMT) is 3 hours, depending on customer requirements.
