

Telehaptic services - ECG

We have partnered with cardi-track to offer the latest internet-connected ECG machines to Africa. Our new ECG devices are cloud-enabled, utilising the latest ECG artificial intelligence technology. Furthermore, all readings are checked and verified by human cardiology experts based in the UK and India

It is worth noting that all our ECG machines record and display ECG in real time. The data is securely transmitted to our UK expert in a fraction of a second. Our reporting time during core office hours (0900 – 1700 GMT) is 30 minutes to 3 hours, depending on customer requirements. Therefore, patients in Africa can receive an ECG report from an accredited UK electrophysiologist or trained ECG experts before they leave their local medical facility.

Our service delivers world class healthcare by accessing world class cardiology experts at the fraction of the cost of sending African patients overseas.

Medcore is the sole distributor of this service/technology in Africa and, as such, we have the authority to enter into public-private partnership or direct sales with all establishments and partners.

On a related matter, ME90 are novel, easy-to-use cardiac arrhythmia screening device. These machines detect Atrial Fibrillation, which is considered to be the single most important cause of stroke worldwide according to WHO. The devices are quick to use (60 seconds) and do not require the patient to undress. Therefore, large numbers of patients can be screened economically with a high degree of sensitivity and specificity.

If the devices pick up Atrial Fibrillation, our team of UK-based stroke consultants can offer free medical advice to reduce the risks associated with this condition. We believe connecting to the very best specialist advice will be a significant benefit to both your patients and institution. We also offer bespoke services with e-consulting with efficient engagement with a view of attaining high-end delivery.

All the above will be done in collaboration with your local medical team. This strategy will boost customer confidence, thus increasing the number of clients. The service enhancement will make your institution more attractive to corporate customers.
