

Enhancing Care &  
Business

This document sets out the important requirements for teleradiology in Nigeria

## Our vision for tele-radiology

Tele-radiology is defined as the transfer of digital images through an internationally recognized PACS system for reporting in another centre where Consultant Radiologists are provided.

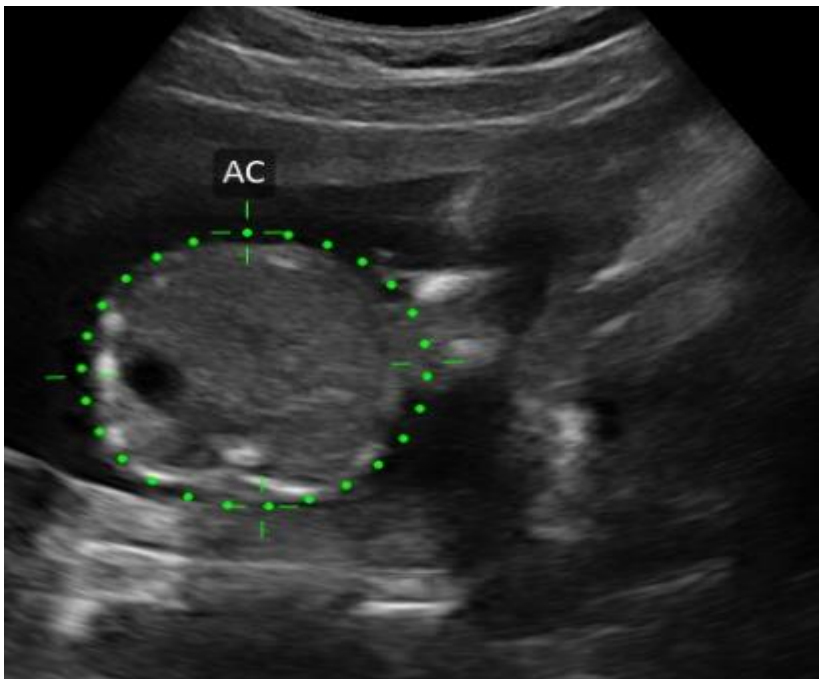

We have a portable Xray machine which can be transported in a special backpack. We can come to any facility and do the Xray. The radiation emitted is less than that of the sun and does not constitute any hazard.

Our ultrasound machine is equally portable and gives very clear images.

You can request our teleradiology services by giving us a call. You can send the patients to our centres for x-rays or ultrasound. We can also come to your centre or to the patients home or office and carry out the investigation in a confidential manner.

## Benefits

1. Enhanced and deeper learning
2. Immediate imaging results in all the hospital wards
3. More competitive radiology program
4. Income generator
5. Cost efficiency
6. Fast turnaround reporting time
7. 24hr coverage including weekend and vacation
8. Flexibility to meet patients' needs
9. Zero cost of installation
10. Access to images for comparison

*Providing high-quality image reporting*

*A sustainable model for Radiology reporting*

*Fully scalable options for ongoing future expansion*

*A secure PACS system*

*Improving patient safety & outcomes*
